## PREFACE

This series is one of three series designed to provide final population counts for the entire country based on the 1986 Census. This series of national publications presents population counts for several standard census geographic areas, i.e. federal electoral districts and census enumeration areas, census divisions and census subdivisions, census metropolitan areas and census agglomerations. Another publication presents population counts for all census unincorporated places in Canada.

Two other series provide similar data in provincial and regional presentations for these and other geographic levels.

Where data are reported for the same geographic areas in both the provincial and national publications, then the national publications generally present only 1986 population counts and population rankings whereas the provincial publications report additional data such as the population, on June 3, 1981, the population change between 1981 and 1986, the number of occupied private dwellings in 1986, as well as the 1986 land area and population density.

Population counts from the Census of Canada reflect a de jure enumeration method that counts persons where they are found on Census Day and then adjusts the count if the particular location is not their usual place of residence.

Population counts reported in these publications are unrounded and are based on an enumeration of the total population.

## PRÉFACE

La présente série est l'une de trois séries offrant les chiffres définitifs de population du recensement de 1986 pour l'ensemble du pays. Constituée de publications nationales, elle présente les chiffres de population pour plusieurs régions géographiques normalisées du recensement comme les circonscriptions électorales fédérales et les secteurs de dénombrement du recensement, les divisions de recensement et les subdivisions de recensement, les régions métropolitaines de recensement et les agglomérations de recensement. Une autre publication fournit les chiffres de population pour toutes les localités non constituées de recensement au Canada.

Les deux autres séries sont formées de publications provinciales et régionales offrant des données semblables pour les mêmes niveaux géographiques et pour d'autres niveaux.

Lorsque les publications provinciales et nationales renferment les données pour les mêmes régions géographiques, les publications nationales ne contiennent généralement que les chiffres de population de 1986 et le classement selon la population, tandis que les publications provinciales comprennent d'autres données comme la population en date du 3 juin 1981, la variation de la population entre 1981 et 1986, le nombre de logements privés occupés en 1986 ainsi que les données de 1986 sur la superficie et la densité de la population.

Les chiffres de population du recensement du Canada sont établis à partir d'une méthode de dénombrement de jure qui consiste à dénombrer les personnes là où elles se trouvent le jour du recensement et, si ce lieu ne correspond pas au lieu habituel de résidence, à corriger les chiffres.

Les chiffres de population présentés dans ces publications ne sont pas arrondis et sont fondés sur le dénombrement de l'ensemble de la population.

## GUIDELINES FOR USING THIS PUBLICATION

### Purpose

This publication is one of five publications (Catalogue Nos. 92-101 to 92-105) that together provide population counts for many standard census geostatistical areas in Canada. This publication presents population counts of the 1986 Census of Canada for all unincorporated places (UPs) in Canada.

Unincorporated places, as defined by the census, refer to any cluster of five or more permanently occupied dwellings, in rural areas, locally known by a specific name but not having a local government or legal limits. Unincorporated places are not reported if located in areas defined by the census as being urban.

### Organization of the Publication

#### Table

This publication contains one table that reports all census UPs in Canada in alphabetical order, provides the 1986 population and indicates the province, census division and census subdivision in which each UP is located.

#### Definitions, Methodology and Special Notes

Additional reference material, such as detailed definitions of terms and explanations of data quality, etc., may be found at the end of this publication immediately following the table. This information is presented separately in English and French sections for easier use.

### Geographic and Content Considerations

Because unincorporated places, by definition, lack legal or official boundaries, it is not possible to define census enumeration areas that are equivalent to unincorporated places. The identification of unincorporated places is carried out primarily by Census Representatives during the collection operation and involves some degree of individual judgement.

## LIGNES DIRECTRICES POUR L'UTILISATION DE CETTE PUBLICATION

### But

Cette publication est l'une de cinq publications (nos 92-101 à 92-105 au catalogue) qui, ensemble, donnent les chiffres de population pour de nombreuses unités géostatistiques normalisées du recensement au Canada. Elle présente les chiffres de population établis par le recensement du Canada de 1986 pour les localités non constituées (LNC) au Canada.

Les localités non constituées, selon la définition du recensement, représentent un groupe quelconque d'au moins cinq logements occupés en permanence et situés dans une région rurale, connu localement sous un nom précis mais n'ayant pas d'administration locale ou de limites juridiques. Elles ne sont pas prises en compte si elles sont situées dans des régions considérées comme urbaines selon la définition du recensement.

### Organisation de la publication

#### Tableau

Cette publication renferme un tableau qui présente toutes les LNC de recensement au Canada par ordre alphabétique, indique la population en 1986 ainsi que la province, la division de recensement et la subdivision de recensement où est située chaque LNC.

#### Définitions, méthodologie et notes spéciales

Vous trouverez d'autres données de référence, comme la définition détaillée des termes et des précisions sur la qualité des données, etc., à la fin de la publication, immédiatement après le tableau. Ces renseignements sont présentés dans des sections française et anglaise distinctes, ce qui en facilite la consultation.

### Facteurs de géographie et de contenu

Étant donné que, par définition, les localités non constituées n'ont pas de limites juridiques ou officielles, il n'est pas possible de définir des secteurs de dénombrement du recensement qui correspondent à des localités non constituées. Leur identification est effectuée essentiellement par les recenseurs durant la collecte, et elle exige une certaine part de discernement personnel.

In order to ensure as uniform a method as possible for the identification and reporting of UPs, Census Representatives are instructed to identify all clusters of five or more permanently occupied dwellings locally known by a specific name but not having a local government. To assist them in their work, each Census Representative is provided with a list of UPs that were in his/her enumeration area at the time of the last census. Unincorporated places are added to or deleted from this list by the Census Representative according to what he/she finds during the enumeration process. Therefore, the unincorporated place names reported by the census may not correspond to names officially recognized by provincial/territorial authorities or the Canadian Permanent Committee on Geographical Names.

Unincorporated places are not reported in those areas defined by the census as being urban. This is because urban areas, as defined by the census, are themselves reported as geostatistical areas in census publications. Furthermore, because urban areas are continuously built-up areas and unincorporated places are clusters of dwellings it is difficult to accurately and consistently identify more than one unincorporated place in an urban area. For a complete list of urban areas in each province and territory, users should consult those publications providing population and dwelling counts (Catalogue Nos. 92-109 to 92-120, Table 12).

The census does not provide comparative 1981 population counts for the 1986 UPs. This is due to the fact that a UP with the same name reported in two censuses may not be comparable. Additional information about unincorporated places, their location and population counts will be included in the three 1986 Place Name Reference Lists (Catalogue Nos. 92-121 to 92-123).

Afin d'assurer la plus grande uniformité possible de la méthode utilisée pour l'identification et l'observation des LNC, on demande aux recenseurs d'identifier toutes les grappes d'au moins cinq logements occupés en permanence et connus localement sous un nom précis mais n'ayant pas d'administration locale. Pour les aider dans leur travail, on remet à chacun une liste des LNC qui se trouvaient dans son secteur de dénombrement lors du recensement précédent. Le recenseur ajoute à cette liste ou en supprime des localités non constituées selon ce qu'il découvre durant le processus de dénombrement. C'est pourquoi les noms des localités non constituées attribués par le recensement peuvent ne pas correspondre aux noms officiels établis par les autorités provinciales/territoriales ou par le Comité permanent canadien des noms géographiques.

Les localités non constituées ne sont pas indiquées dans les régions considérées comme urbaines selon la définition du recensement. La raison en est que les régions urbaines, selon la définition du recensement, sont elles-mêmes indiquées comme unités géostatistiques dans les publications du recensement. En outre, du fait que les régions urbaines représentent des régions bâties en continu et que les localités non constituées représentent des grappes de logements, il est difficile d'identifier de façon précise et uniforme plus d'une localité constituée dans une région urbaine. Pour une liste complète des régions urbaines de chaque province et territoire, les utilisateurs devraient consulter les publications qui fournissent les chiffres de population et des logements (nos 92-109 à 92-120 au catalogue, tableau 12).

Le recensement ne fournit pas les chiffres de population correspondants de 1981 pour les LNC de 1986, et ce parce que des LNC portant le même nom dans les deux recensements ne sont pas nécessairement équivalentes. Des informations supplémentaires concernant les localités non constituées, leur localisation et leurs chiffres de population figureront dans les trois Listes de référence des noms de localités, 1986 (nos 92-121 à 92-123 au catalogue).

## Symbols

The following standard symbols are used in Statistics Canada publications:

- .. figures not available
- ... figures not appropriate or not applicable
- nil or zero
- amount too small to be expressed

## 1986 Census Products and Services

### Overview

The 1986 Census product line is designed to serve the diverse needs of our users. Using as a base the most demanded publications of past censuses, a full series of data, reference and analytical publications will be offered.

For the first time in 1986, a semi-custom product service will be available. This service allows users to choose from a selection of popular tables that feature most census characteristics such as age, sex, ethnic origin, occupation, etc., and identify their own specific geographic area of interest.

Custom data products remain our speciality. Customers may define their own parameters on data characteristics and geography (including user-defined areas) with the help of professional data consultants and systems people who are available to assist users in unravelling the technicalities of the census data base. Let Statistics Canada help you decide which product best suits your needs.

Further details on the products and services available from the census are contained in the 1986 Census Products and Services, Final Edition (Catalogue No. 99-103E).

## Signes conventionnels

Les signes conventionnels suivants sont employés uniformément dans les publications de Statistique Canada:

- .. nombres non disponibles
- ... n'ayant pas lieu de figurer
- néant ou zéro
- nombres infimes

## Produits et services du recensement de 1986

### Aperçu

La gamme des produits du recensement de 1986 doit répondre aux besoins variés de nos utilisateurs. En fonction des publications les plus populaires des derniers recensements, nous offrirons une série complète de données, de documents de référence et d'ouvrages analytiques.

Pour la première fois, nous offrirons en 1986 un service de produits semi-personnalisés. Ce service permet aux utilisateurs de choisir parmi des tableaux populaires contenant la plupart des caractéristiques du recensement, comme l'âge, le sexe, l'origine ethnique, la profession, etc., et de déterminer la région géographique qui les intéresse.

Les produits de données personnalisés demeurent notre spécialité. Les clients peuvent définir leurs propres paramètres relatifs aux caractéristiques et aux régions géographiques visées par les données (y compris les régions déterminées par l'utilisateur), de concert avec les conseillers en données professionnels et les analystes de systèmes qui sont à leur disposition pour les aider à éclaircir les aspects techniques de la base de données du recensement. Laissez Statistique Canada vous aider à déterminer le produit qui répond le mieux à vos besoins.

Vous trouverez des renseignements supplémentaires sur les produits et services du recensement dans la publication Produits et services du recensement de 1986, version définitive (n° 99-103F au catalogue).

**Reference Products**

Users who may require assistance in the understanding and interpretation of the data should refer to the 1986 Census Dictionary (Catalogue No. 99-101E). This publication provides a range of definitions for all variables and terms used in the 1986 Census data products.

Users should contact their nearest Statistics Canada Regional Office for details. Addresses and telephone numbers appear on the last page of this publication.

**Produits de référence**

Les utilisateurs qui auraient besoin d'aide pour comprendre et interpréter les données peuvent consulter le Dictionnaire du recensement de 1986 (n° 99-101F au catalogue). Cette publication offre une définition de toutes les variables et de tous les termes utilisés dans les produits de données du recensement de 1986.

Pour obtenir de plus amples renseignements, les utilisateurs n'ont qu'à communiquer avec le bureau régional de Statistique Canada le plus près. Les adresses et numéros de téléphone des bureaux régionaux figurent à la dernière page de cette publication.

## DEFINITIONS

### CENSUS DIVISION (CD)

Refers to the general term applying to census divisions, counties, regional districts, regional municipalities and five other types of geographic areas made up of groups of census subdivisions.

In Newfoundland, Manitoba, Saskatchewan and Alberta, provincial law does not provide for geographic areas which are intermediate between the census subdivision and the province. Therefore, census divisions have been created by Statistics Canada in co-operation with the provinces. In all other provinces, the different types of census divisions and their limits are established by provincial law.

### CENSUS SUBDIVISION (CSD)

Refers to the general term applying to municipalities, Indian reserves, Indian settlements and unorganized territories.

In Newfoundland, Nova Scotia and British Columbia, the term also describes geostatistical areas that have been created by Statistics Canada in co-operation with the provinces as equivalents for municipalities.

### CENSUS SUBDIVISION TYPE

Census subdivisions are classified into various types, according to official designations adopted by provincial or federal authorities. With the exception of unorganized territories, Indian reserves and Indian settlements, hamlets in the Northwest Territories and settlements in the Yukon Territory, the type indicates the municipal status of a CSD. The following list indicates the abbreviations used for the most common CSD types:

BOR	Borough
C	City - Cité
CM	County (Municipality)
COM	Community
CT	Canton (Municipalité de)
CU	Cantons unis (Municipalité de)
DM	District (Municipality)
HAM	Hamlet
ID	Improvement District
LGD	Local Government District
LOT	Township and Royalty

MD	Municipal District
NH	Northern Hamlet
NV	Northern Village
P	Paroisse (Municipalité de)
PAR	Parish
R	Indian Reserve - Réserve indienne
RM	Rural Municipality
RV	Resort Village
SA	Special Area
SCM	Subdivision of County Municipality
SD	Sans désignation (Municipalité)
S-E	Indian Settlement - Établissement indien
SET	Settlement
SRD	Subdivision of Regional District
SUN	Subdivision of Unorganized
SV	Summer Village
T	Town
TP	Township
UNO	Unorganized - Non organisé
V	Ville
VC	Village Cri
VK	Village Naskapi
VL	Village
VN	Village Nordique

### ENUMERATION AREA (EA)

Refers to the area usually canvassed by one Census Representative. It is defined according to the following criteria: (1) Households - the number of households in an enumeration area generally varies between a maximum of 375 households in large urban areas to a minimum of 125 in rural areas; (2) Limits - an enumeration area, being the building block of all geostatistical areas, never cuts across any geographic area recognized by the census. Moreover, enumeration area boundaries are defined such that the Census Representative will be able to locate them with as little difficulty as possible, for example, streets, roads, railways, rivers and lakes. Enumeration areas are normally the smallest geographic unit for which census data are available.

### GEOSTATISTICAL AREA

Refers to geographic areas delineated or employed for the tabulation and dissemination of census data. This term applies to provinces and territories, census divisions, census subdivisions, census consolidated subdivisions, census metropolitan areas, census agglomerations, primary census metropolitan areas, primary census agglomerations, census tracts, provincial census tracts, urban areas, federal electoral districts and enumeration areas.

## PROVINCE

Refers to the major political division of Canada. From a statistical point of view, it is a basic unit for which data are tabulated and cross-classified. In census publications, provincial tables include the Yukon Territory and the Northwest Territories.

## UNINCORPORATED PLACE

Refers to any cluster of five or more permanently occupied dwellings, in rural areas, locally known by a specific name but not having a local government or legal limits. Unincorporated places are not reported if located in areas defined by the census as being urban.

## URBAN AREA

Refers to a continuously built-up area having a population concentration of 1,000 or more and a population density of 400 or more per square kilometre, based on the previous census. To be considered as continuous, the built-up area must not have a discontinuity exceeding two kilometres.

In addition to the above, many other commercial, industrial and institutional land uses may be considered as urban even though they do not meet the population and density requirements. Examples include commercial and industrial areas, railway yards, airports, parks, golf courses, cemeteries, etc.

## DATA QUALITY

### GENERAL

The 1986 Census was a large and complex undertaking and, while considerable effort was taken to ensure high standards throughout all collection and processing operations, the resulting estimates are inevitably subject to a certain degree of error. Users of census data should be aware such error exists, and have some appreciation of its main components, so that they can assess the usefulness of census data for their purposes and the risks involved in basing conclusions or decisions on these data.

Errors can arise at virtually every stage of the census process from the preparation of materials, through the listing of dwellings and data collection to processing. Some errors occur more or less at random, and when the individual responses are aggregated for a sufficiently large group, such

errors tend to cancel out. For errors of this nature, the larger the group, the more accurate the corresponding estimate. It is for this reason that users are advised to be cautious when using small estimates. There are some errors, however, which occur more systematically, and which result in "biased" estimates. Because the bias from such errors is persistent no matter how large the group for which responses are aggregated, and because bias is particularly difficult to measure, systematic errors are a more serious problem for most data users than the random errors referred to previously.

For census data in general, the principal types of error are as follows:

- **coverage errors**, which occur when dwellings and/or individuals are missed, incorrectly included or double counted;
- **non-response errors**, which result from the fact that responses cannot be obtained from a small number of households and/or individuals, because of extended absence or some other reason;
- **response errors**, which occur when the respondent, or sometimes the Census Representative, misunderstands a census question, and records an incorrect response;
- **processing errors**, which can occur at various steps including: **data capture**, when responses are transferred from the census questionnaire to computer tapes by key-punch operators; **coding**, when "write-in" or verbal responses are transformed into numerical codes by clerks; and **imputation**, when a "valid", but not necessarily correct, response is inserted into a record by the computer to replace missing or "invalid" data ("valid" and "invalid" referring to whether or not the response is consistent with other information on the record);
- **sampling errors**, which apply only to the supplementary questions on the "long form" asked of a one-fifth sample of households, and which arise from the fact that the results for these questions, when weighted up to represent the whole population, inevitably differ somewhat from the results which would have been obtained if these questions had been asked of all households.

The above types of error each have both random and systematic components. Usually, however, the systematic component of sampling error is very small in relation to its random component. For the

other non-sampling errors, both random and systematic components may be significant.

## COVERAGE ERRORS

Since the data contained in this publication do not involve the supplementary questions on the "long form", they are not subject to any sampling error. Of the non-sampling errors described above, by far the most important as far as the data in this report are concerned are coverage errors.

The population and dwelling counts, while final, are still subject to some degree of error resulting from dwellings or persons being missed, incorrectly included in the census or double counted.

Missed dwellings or persons result in **undercoverage**. Dwellings can be missed because of misunderstanding of enumeration area (EA) boundaries, or because dwellings are hidden or appear uninhabitable. Persons can be missed because their dwelling is missed or classified as vacant or because household members temporarily away from the dwelling are omitted. Some individuals may be missed because they have no usual residence and did not spend census night in any dwelling.

Dwellings or persons that are incorrectly included or double counted result in **overcoverage**. Overcoverage of dwellings can occur when structures unfit for habitation are listed as dwellings, or when units which do not meet the census definition of a dwelling are listed separately, instead of being treated as part of a larger dwelling. Double counting of dwellings can occur, for example, because of ambiguity over EA boundaries. Persons can be double counted because their dwelling is double counted or because the guidelines on whom to include on the questionnaire have been misunderstood. Occasionally, someone who is not a Canadian resident may, incorrectly, be enumerated in the census. On average, overcoverage is less likely to occur than undercoverage and, as a result, counts of dwellings and persons are likely to be slightly underestimated.

In 1986, four studies were undertaken to measure different aspects of coverage error. First, a sample of dwellings listed as vacant were revisited to verify that they really were vacant on Census Day. Adjustments have been made to the final census counts for households missed because their dwelling was incorrectly classified as vacant. Secondly, a sample of persons enumerated as temporary residents was selected to verify whether or not they were enumerated at their usual place

of residence. Again, adjustments have been made to final census counts to compensate for persons missed because they were temporarily absent from their usual place of residence. Despite these adjustments, the final counts are still subject to some undercoverage. For Canada as a whole and for each province, the magnitude of this residual undercoverage in the 1986 Census is being measured by means of a special study known as the Reverse Record Check. The results of this study were not available at the time this publication was produced, but similar studies conducted during previous censuses indicate an overall undercoverage rate of approximately 2% for both persons and households. Undercoverage tends to be higher for certain segments of the population such as young adult males and recent immigrants. Undercoverage is offset to some degree by overcoverage errors, and in 1986 for the first time a special study was carried out to investigate overcoverage errors. Again, results were not available at the time this publication was produced.

For further information on coverage and other errors in census data, contact Social Survey Methods Division at Statistics Canada, Ottawa, Canada K1A 0T6 (613) 951-6932.

## SPECIAL NOTES

### INCOMPLETELY ENUMERATED INDIAN RESERVES AND INDIAN SETTLEMENTS

On some Indian reserves and Indian settlements in the 1986 Census, enumeration was not permitted or was interrupted before it could be completed. Certain Indian reserves and settlements are therefore footnoted in the tables as being incompletely enumerated.

Data for 1986 are not available for the incompletely enumerated reserves and settlements and are not included in subprovincial aggregations. Therefore, data for geographic areas containing one or more of these reserves or settlements are footnoted accordingly. Because of the missing data, users are cautioned that for affected geographic areas, comparisons (e.g., percentage change) between 1981 and 1986 are not exact. While for higher level geographic areas (Canada, provinces, census metropolitan areas and census agglomerations) the impact of the missing data is very small, the impact can increase for smaller areas containing a larger proportion of affected reserves and settlements.

While it is not possible to estimate the population of each incompletely enumerated reserve,

estimates of population and occupied private dwellings have been made for the total number of incompletely enumerated Indian reserves and settlements in each province. (See Appendix 1.)

It should be noted that for all tables that show data for subprovincial areas, the totals shown for 1986 for Canada and the provinces are the sums of the 1986 Census counts for the subprovincial areas and

therefore do not include the estimates of the missed population and dwellings.

A list of incompletely enumerated Indian reserves and Indian settlements is shown in Appendix 2 together with the province, census division and, where applicable, the census metropolitan area or census agglomeration (CMA/CA) in which each is located.

## ACCESSIBLE FROM COAST TO COAST

Statistics Canada's regional reference centres provide a full range of the census products and services. Each reference centre is equipped with a library and a sales counter where users can consult or purchase census publications, microcomputer diskettes, microfiche, maps and more. Each centre has facilities to retrieve information from Statistics Canada's computerized data retrieval systems - CANSIM and TELICHART. A telephone inquiry service is also available with toll-free numbers for regional clients outside local calling areas. Many other services - from seminars to consultations - are offered. Call or write your regional reference centre for information.

## DÉFINITIONS

### DIVISION DE RECENSEMENT (DR)

Terme générique qui désigne les divisions de recensement, les comtés, les districts régionaux, les municipalités régionales et cinq autres types de régions géographiques formés de groupes de subdivisions de recensement.

Les lois provinciales de Terre-Neuve, du Manitoba, de la Saskatchewan et de l'Alberta ne prévoient pas la création de secteurs géographiques intermédiaires entre la subdivision de recensement et la province. C'est pourquoi les divisions de recensement ont été établies par Statistique Canada en collaboration avec les provinces. Dans toutes les autres provinces, les divers types de divisions de recensement sont définis et délimités par des lois provinciales.

### GENRE DE SUBDIVISION DE RECENSEMENT

Les subdivisions de recensement sont classées en divers genres selon les appellations adoptées par les autorités provinciales ou fédérales. À l'exception des territoires non organisés, des réserves indiennes et des établissements indiens, des "hamlets" dans les Territoires du Nord-Ouest et des "settlements" dans le Yukon, le genre de subdivision de recensement indique son statut. Voici la liste des abréviations des genres de subdivisions de recensement les plus courants:

BOR	Borough
C	City - Cité
CM	County (Municipality)
COM	Community
CT	Canton (Municipalité de)
CU	Cantons unis (Municipalité de)
DM	District (Municipality)
HAM	Hamlet
ID	Improvement District
LGD	Local Government District
LOT	Township and Royalty
MD	Municipal District
NH	Northern Hamlet
NV	Northern Village
P	Paroisse (Municipalité de)
PAR	Parish
R	Indian Reserve - Réserve indienne
RM	Rural Municipality
RV	Resort Village
SA	Special Area
SCM	Subdivision of County Municipality
SD	Sans désignation (Municipalité)
S-E	Indian Settlement - Établissement indien

SET	Settlement
SRD	Subdivision of Regional District
SUN	Subdivision of Unorganized
SV	Summer Village
T	Town
TP	Township
UNO	Unorganized - Non organisé
V	Ville
VC	Village Cri
VK	Village Naskapi
VL	Village
VN	Village Nordique

### LOCALITÉ NON CONSTITUÉE

Groupe d'au moins cinq logements occupés en permanence, dans une région rurale, connu localement sous un nom précis, mais n'ayant pas d'administration locale ou de limites légales. Les localités non constituées ne sont pas présentées si elles sont situées dans une région définie par le recensement comme étant une région urbaine.

### PROVINCE

Principale division politique du Canada. Du point de vue statistique, c'est une unité de base pour laquelle toutes les données sont totalisées et recoupées. Dans les publications du recensement, les tableaux relatifs aux provinces comprennent le Yukon et les Territoires du Nord-Ouest.

### RÉGION URBAINE

Région bâtie en continu dont la concentration démographique est de 1,000 habitants ou plus et dont la densité est de 400 habitants ou plus au kilomètre carré, d'après les chiffres de population du recensement précédent. Pour être considérée comme continue, une région bâtie ne doit pas comporter d'espaces libres de plus de deux kilomètres.

Indépendamment des critères qui précèdent, peuvent également être considérés comme faisant partie d'une région urbaine divers terrains utilisés à des fins commerciales, industrielles ou publiques même s'ils ne satisfont pas aux exigences de la population et de la densité. Il s'agit notamment des zones commerciales et industrielles, des gares de triage, des aéroports, des parcs, des terrains de golf, des cimetières, etc.

### SECTEUR DE DÉNOMBREMENT (SD)

Unité géographique dénombrée par un recenseur. Elle est définie selon les critères suivants: (1) Ménages - le nombre de ménages dans un secteur

de dénombrement peut varier de 375 (maximum) dans les grandes régions urbaines à 125 (minimum) dans les régions rurales; (2) Limites - un secteur de dénombrement étant l'unité de base de toutes les unités géostatistiques, il ne déborde jamais une unité reconnue par le recensement. Par ailleurs, les limites des secteurs de dénombrement sont définies de manière que le recenseur puisse les repérer sans difficulté (par exemple, rues, chemins, voies ferrées, rivières et lacs). Les secteurs de dénombrement constituent normalement les plus petites unités géographiques pour lesquelles on peut obtenir des données de recensement.

## SUBDIVISION DE RECENSEMENT (SDR)

Terme générique qui désigne les municipalités, les réserves indiennes, les établissements indiens et les territoires non organisés.

À Terre-Neuve, en Nouvelle-Écosse et en Colombie-Britannique, l'expression désigne également des unités géostatistiques créées comme équivalents des municipalités et délimitées par Statistique Canada en collaboration avec les provinces.

## UNITÉ GÉOSTATISTIQUE

Toute région géographique délimitée ou utilisée pour la totalisation et la diffusion des données du recensement. L'expression englobe les provinces et territoires, les divisions de recensement, les subdivisions de recensement, les subdivisions de recensement unifiées, les régions métropolitaines de recensement, les agglomérations de recensement, les régions métropolitaines de recensement primaires, les agglomérations de recensement primaires, les secteurs de recensement, les secteurs de recensement provinciaux, les régions urbaines, les circonscriptions électorales fédérales et les secteurs de dénombrement.

## QUALITÉ DES DONNÉES

### GÉNÉRALITÉS

Le recensement de 1986 a été un projet complexe de grande envergure. Même si l'on a déployé des efforts considérables pour maintenir des normes élevées tout au cours des activités de collecte et de traitement, les estimations obtenues sont inévitablement entachées d'erreurs. Les utilisateurs doivent savoir que ces erreurs existent et avoir une idée générale des principales composantes du recensement afin d'être en mesure de déterminer si les données du recensement peuvent leur être

utiles et évaluer les risques que comporte le fait de baser leurs conclusions ou leurs décisions sur ces données.

Des erreurs peuvent se produire pratiquement à toutes les étapes du recensement, allant de la préparation des documents au traitement des données, en passant par l'établissement des listes des logements et la collecte des données. Certaines erreurs peuvent survenir plus ou moins au hasard et, lorsque les différentes réponses sont agrégées pour un groupe suffisamment grand, elles tendent à s'annuler. Dans le cas des erreurs de cette nature, plus le groupe est grand, plus l'estimation correspondante est exacte. C'est pour cette raison que les utilisateurs sont invités à employer avec une certaine réserve les petites estimations. Par contre, d'autres erreurs peuvent se produire systématiquement et entraîner des estimations "biaisées". Comme le biais découlant de ces erreurs est persistant, peu importe la taille du groupe pour lequel les réponses sont agrégées, et qu'il est particulièrement difficile à mesurer, les erreurs systématiques posent un plus grave problème à la plupart des utilisateurs des données que les erreurs aléatoires mentionnées plus haut.

En ce qui concerne les données du recensement en général, les principaux types d'erreur sont les suivants:

- les **erreurs d'observation**, qui se produisent lorsqu'on oublie des logements ou des personnes, qu'on les englobe à tort ou qu'on les compte deux fois;
- les **erreurs dues à la non-réponse**, qui découlent du fait qu'on n'a pas pu obtenir de réponses d'un petit nombre de ménages et/ou de personnes à cause d'une absence prolongée ou pour toute autre raison;
- les **erreurs de réponse**, qui surviennent lorsque le répondant, et parfois le recenseur, a mal interprété une question du recensement et a inscrit une mauvaise réponse;
- les **erreurs de traitement**, qui peuvent se produire à diverses étapes, notamment: à la **saisie des données**, lorsque les préposés à l'introduction des données transfèrent sur les bandes pour ordinateur les réponses figurant sur le questionnaire du recensement; au **codage**, lorsque les commis transcrivent ou transforment les réponses verbales et les réponses en toutes lettres en codes numériques; à l'**imputation**, lorsque l'ordinateur insère dans un enregistrement une réponse "valide", mais pas nécessairement exacte, pour remplacer des données manquantes ou "invalides" (une

réponse est "valide" si elle est conforme aux autres renseignements de l'enregistrement, elle est "invalidé" si elle n'est pas conforme);

- les **erreurs d'échantillonnage**, qui s'appliquent uniquement aux questions supplémentaires figurant sur la formule complète et s'adressant à un échantillon d'un cinquième des ménages; elles résultent du fait que les réponses à ces questions, lorsqu'elles sont pondérées pour représenter l'ensemble de la population, diffèrent inévitablement des résultats qu'on aurait obtenus si on avait posé ces questions à tous les ménages.

Les types d'erreur ci-dessus ont chacun une composante aléatoire et une composante systématique. Toutefois, la composante systématique des erreurs d'échantillonnage est généralement très faible par rapport à la composante aléatoire. Par contre, dans le cas des erreurs non dues à l'échantillonnage, les deux composantes peuvent être importantes.

## ERREURS D'OBSERVATION

Étant donné que les données présentées dans cette publication ne tiennent pas compte des questions supplémentaires figurant sur la formule complète, elles ne sont pas sujettes aux erreurs d'échantillonnage. De toutes les erreurs non dues à l'échantillonnage décrites ci-dessus, celles qui sont de loin les plus importantes en ce qui concerne les chiffres de population et des logements sont les erreurs d'observation.

Une certaine marge d'erreur subsiste toujours dans les chiffres de population et des logements, même s'ils sont définitifs, du fait que des logements ou des personnes ont été oubliés, pris en compte par erreur dans le recensement ou comptés deux fois.

Si des logements ou des personnes n'ont pas été pris en compte alors qu'ils auraient dû l'être, on a un **sous-dénombrement**. Des logements peuvent être oubliés à la suite d'une mauvaise interprétation des limites des secteurs de dénombrement (SD) ou du fait que des logements sont cachés ou semblent inhabitables. Des personnes peuvent être oubliées parce que leur logement est oublié ou classé comme inoccupé ou bien parce que les membres des ménages temporairement absents sont omis. Certaines personnes peuvent être oubliées parce qu'elles n'ont aucun lieu habituel de résidence et qu'elles ne se trouvaient dans aucun logement la nuit du recensement.

Les logements ou les personnes qui ont été pris en compte par erreur ou qui ont été comptés deux fois

donnent lieu à un **surdénombrement**. Le surdénombrement des logements peut se produire lorsque des constructions ne convenant pas à l'habitation sont comptées comme des logements ou lorsque des unités qui ne correspondent pas à la définition d'un logement utilisée dans le recensement sont énumérées séparément au lieu d'être considérées comme faisant partie d'un grand logement. Le double compte des logements peut se produire, par exemple dans les cas où les limites des SD ne sont pas clairement définies. Les personnes peuvent être comptées deux fois parce que leur logement est compté deux fois ou parce que les lignes directrices concernant les personnes à inscrire dans le questionnaire ont été mal interprétées. Parfois, une personne qui n'habite pas habituellement le Canada peut être comptée, à tort, dans le recensement. En moyenne; le surdénombrement est moins susceptible de se produire que le sous-dénombrement; les chiffres des logements et des personnes sont donc probablement légèrement sous-estimés.

En 1986, on a entrepris quatre études pour mesurer les différents aspects des erreurs d'observation. Premièrement, on a revisité un échantillon des logements dénombrés comme inoccupés afin de vérifier s'ils étaient vraiment inoccupés le jour du recensement. On rectifiera les chiffres définitifs du recensement pour tenir compte des ménages oubliés parce que leur logement a été classé par erreur comme inoccupé. Deuxièmement, on a prélevé un échantillon des personnes dénombrées comme résidents temporaires pour vérifier si elles ont été dénombrées à leur lieu habituel de résidence. Là encore, on rectifiera les chiffres définitifs du recensement pour compenser les personnes qui ont été oubliées parce qu'elles étaient temporairement absentes de leur lieu habituel de résidence. Malgré ces corrections, les chiffres définitifs seront sujets à un certain sous-dénombrement. Pour l'ensemble du Canada et pour chaque province, on mesure l'ampleur de ce sous-dénombrement résiduel dans le recensement de 1986 au moyen d'une étude spéciale: la Contre-vérification des dossiers. Les résultats de cette étude n'étaient pas connus au moment de la mise sous presse, mais les études analogues effectuées au cours des recensements antérieurs indiquent un taux global de sous-dénombrement d'environ 2% à la fois pour les personnes et les ménages. Le sous-dénombrement est généralement plus élevé pour certains groupes de la population, tels que les jeunes hommes adultes et les récents immigrants. Le sous-dénombrement est compensé dans une certaine mesure par les erreurs de surdénombrement; en 1986, on a entrepris pour la première fois une étude spéciale pour déterminer les erreurs de surdénombrement. Là encore, les résultats n'étaient pas connus au moment de la mise sous presse.

Pour de plus amples renseignements sur les erreurs d'observation et les autres erreurs des données du recensement, veuillez communiquer avec la Division des méthodes d'enquêtes sociales de Statistique Canada, Ottawa, Canada K1A 0T6 (613) 951-6932.

## NOTES SPÉCIALES

### RÉSERVES INDIENNES ET ÉTABLISSEMENTS INDIENS PARTIELLEMENT DÉNOMBRÉS

Lors du recensement de 1986, le dénombrement n'a pas été autorisé sur certaines réserves indiennes et établissements indiens ou a dû être interrompu parce qu'on ne pouvait le mener à terme. Par conséquent, des notes au bas des tableaux indiqueront que telle ou telle réserve indienne ou établissement indien n'est que partiellement dénombré.

Les données de 1986 ne sont pas disponibles pour les réserves indiennes et les établissements indiens partiellement dénombrés et ne sont pas comprises dans les agrégats infraprovinciaux. Par conséquent, les données sur les régions géographiques ayant une ou plusieurs de ces réserves ou établissements font l'objet d'un renvoi approprié. En raison des données manquantes, les utilisateurs doivent prendre note que les comparaisons (par ex., des variations en pourcentage) entre 1981

et 1986 ne sont pas exactes pour les régions géographiques en cause. L'effet des données manquantes est très faible pour les régions géographiques de niveau plus élevé (Canada, provinces, régions métropolitaines de recensement et agglomérations de recensement) mais peut être plus important pour les petites régions où les réserves et établissements indiens en cause représentent une proportion plus grande de la population.

Bien qu'il soit impossible d'estimer la population de chaque réserve partiellement dénombrée, des estimations sur la population et le nombre de logements privés occupés ont été faites pour l'ensemble des réserves indiennes et établissements indiens partiellement dénombrés de chaque province. (Voir annexe 1.)

Il est à remarquer que pour tous les tableaux qui présentent des données sur les régions infraprovinciales, les totaux de 1986, pour le Canada et les provinces, sont les sommes des chiffres du recensement de 1986 pour les régions infraprovinciales et ne comprennent pas, par conséquent, les estimations de la population et des logements manquants.

Une liste des réserves indiennes et des établissements indiens partiellement dénombrés figure à l'annexe 2. On a indiqué pour chacune la province, la division de recensement et, le cas échéant, la région métropolitaine de recensement ou l'agglomération de recensement (RMR/AR).

## OÙ NOUS TROUVER?

Les centres régionaux de consultation de Statistique Canada offrent la gamme complète des produits et services du recensement. On y trouve une bibliothèque et un comptoir de vente où les utilisateurs peuvent consulter ou acheter des publications du recensement, des disquettes de micro-ordinateurs, des microfiches, des cartes et plus encore. Chaque centre vous offre la possibilité d'extraire de l'information des systèmes de retrait de données automatisées CANSIM et TELICHART de Statistique Canada. Un service de renseignements téléphonique est également disponible; ce service est gratuit pour les clients se trouvant à l'extérieur des services d'appel locaux. On y offre également plusieurs autres services utiles, allant des séminaires aux consultations. Pour obtenir des renseignements, téléphonez ou écrivez au centre de consultation de votre région.

## Electronic Census "Profiles"

If you find the demographic, cultural, and economic view of Canada's urban centres you get in the Census Tract Profiles publications series useful, you'll appreciate the flexibility of having it in electronic form.

That's why Statistics Canada's Electronic Data Dissemination Division is producing the Profiles series on tape and diskette.

From St. John's to Victoria, Census Tract Profiles are available for 37 large urban areas at both the census tract and component municipalities levels. Further, such profiles are also available for all Census Divisions and Census Subdivisions in the country. And you can easily analyze them in your own computing environment.

1986 Census Tract data are more complete than ever before, with more detailed data on mother tongue and the 65-plus age group, and an additional census-tracked centre - Lethbridge, Alberta.

Any way you want them, the stats on Canada's urban centres are waiting for you at Statistics Canada. Please call your nearest regional reference centre for details.

## Les «Profils» du recensement sur support électronique

Si vous trouvez utiles les aperçus démographiques, culturels et économiques des centres urbains du Canada que vous présente la série de publications «Profils - Secteurs de recensement», vous apprécierez d'autant plus la possibilité de les obtenir sur support électronique.

C'est pourquoi la Division de la diffusion informatique des données de Statistique Canada stocke actuellement cette série sur bandes et sur disquettes.

Vous pouvez ainsi obtenir des profils portant sur 37 grands centres urbains, de St. John's à Victoria; ceux-ci présentent de l'information au niveau des secteurs de recensement et des municipalités les composant. Vous pouvez aussi vous procurer des profils des divisions et subdivisions de recensement. Il ne vous restera plus ensuite qu'à les analyser avec votre propre système informatique.

Vous vous apercevrez également que les données des secteurs de recensement de 1986 sont plus complètes que jamais. Entre autres, il y a davantage de données détaillées sur la langue maternelle et sur les personnes âgées de 65 ans et plus ainsi que des profils des secteurs de recensement de Lethbridge (Alberta).

Quelle que soit la forme sous laquelle vous les désirez, les données portant sur les centres urbains du Canada n'attendent que vous. Pour en savoir plus long, il vous suffit de communiquer avec le centre de consultation de Statistique Canada de votre région.
